

Removing the backing paper from Alpha Gold Dark

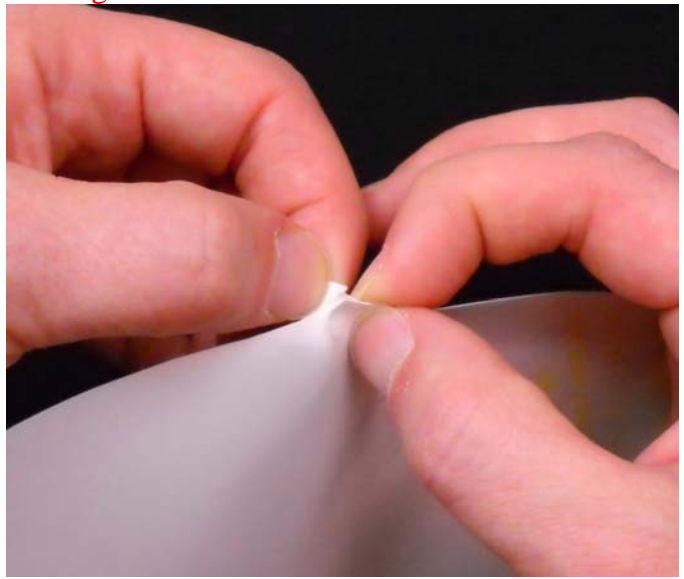

To apply **Alpha Gold Dark**, the back or "carrier" paper has to be removed before pressing to a fabric. Sometimes a batch of any opaque paper will be harder to remove the backing because of slight differences in the mix as the paper is coated. This is not unusual and we must work around these differences from time to time.

Below we show you a work-around you can easily do to help you, if you have a difficulty.

First, we leave a small tab on the edge of the transfer when we trimmed it down.

Next, we tear the backing paper a little to separate the backing from the transfer.

Now, just peel the transfer off the backing paper

Now simply trim off the tab and apply as usual
